

# Active Surveillance for Early Testicular Cancer Non-Seminomatous Germ Cell Tumour

**You have recently been diagnosed with ‘early’ testicular cancer.**

This means it is likely the operation you had to remove your testicle (orchidectomy) has cured the cancer. In addition, we could not see any spread of the cancer on your CT scan, which took pictures from the top of your lungs to your groin. However, we know that in a small number of men the cancer will come back. The most common places for this to happen are in the lymph nodes at the back of your abdomen and your lungs. Your Testicular Cancer Team has assessed the risk of the cancer coming back, but think in your case this risk is small and have recommended:

**Active surveillance (very regular follow up in clinic)**

The aim of active surveillance is to detect the cancer very early if it does come back. We can then give you further treatments (usually chemotherapy), with an excellent chance of cure. We see patients for 5 years; however this is more intensive in the first 2-3 years.

**Active Surveillance for Early Testicular Cancer Non-Seminomatous Germ Cell Tumour**

MONTH      1      2      3      4      5      6      7      8      9      10      11      12

YEAR 1	TM	TM	TM	TM	TM	TM	TM	TM	TM	TM	TM	TM

**DIS-CHARGE**      On discharge your GP will be given the following information:  
 • Details diagnosis  
 • Treatment  
 • Potential late effects  
 • Signs and symptoms of recurrence.  
 If you are worried about potential recurrence or second testicular cancer please contact the team and we will be happy to see you.

TM	Tumour Markers (AFP, HCG, LDH)
CXR	Chest X-ray
PE	Physical examination (We encourage all testicular cancer patients to perform monthly testicular self-examination)
HNA	Holistic needs assessment clinic
CT	CT scan of chest abdomen and pelvis
ST	Survivorship Toolkit Day part of recovery package

If we find anything wrong with any of your tests we will contact you and ask you to come back to clinic for an earlier appointment.  
 Regular attendance is very important!

## Useful Websites:

[www.uhbristol.nhs.uk/btcs](http://www.uhbristol.nhs.uk/btcs)

This is the main website for the BTCS

[www.itsinthebag.org.uk](http://www.itsinthebag.org.uk)

This is a charity fund and patient forum for the SW of England working with BTCS. IITB provide awareness and support

[www.cancerresearchuk.org/about-cancer/testicular-cancer](http://www.cancerresearchuk.org/about-cancer/testicular-cancer)

This site is useful for facts and figures

[www.orchid-cancer.org.uk](http://www.orchid-cancer.org.uk)

Provides factual information, support and has national CNS helpline. They have a microsite called:

[www.yourprivates.org.uk](http://www.yourprivates.org.uk)

Which provides other information and a map of support throughout the UK

[www.testicularcancersociety.org](http://www.testicularcancersociety.org)

USA-based, but forum useful

[www.macmillan.org.uk](http://www.macmillan.org.uk)

Provide lots of information about chemotherapy, radiotherapy, financial support, living well, the list goes on

[www.teenagecancertrust.org](http://www.teenagecancertrust.org)

This is aimed at patients aged 15-24 years

[www.therobincancertrust.org](http://www.therobincancertrust.org)

This website has information about all germ cell cancers, includes primary and female patients

[https://community.macmillan.org.uk/cancer\\_types/testicular-cancer/](https://community.macmillan.org.uk/cancer_types/testicular-cancer/)

This leaflet has been provided by the Bristol Testicular Cancer Service
