# Alcohol dependence

There are a few ways to identify whether you are physically dependent on alcohol. Someone who is physically dependent will typically drink every day, and will often need to drink within a few hours of waking up in the morning. However, the most important indicator of alcohol dependence is withdrawal symptoms if you suddenly stop drinking, or reduce your normal alcohol intake too quickly.

## Alcohol withdrawal symptoms include:

Tremor, sweating, feeling or being sick, palpitations, anxiety or irritability, disturbed sleep. These may also include fits (seizures) or hallucinations (seeing things that aren't there).

**If you think you are alcohol dependent and suffer from withdrawal symptoms, do not suddenly stop drinking, as this can be dangerous to your health. It is therefore much safer to reduce gradually.**

The severity of alcohol withdrawal can vary from person to person. One episode of alcohol withdrawal can differ from the next. It is impossible to tell you exactly what to do, but instead, use the advice on the next page to form a reduction plan that's right for you.

### Disclaimer

**This leaflet cannot replace professional advice. Alcohol withdrawal can make physical demands on the body that may put some people at increased risk. If you are unsure, you should discuss your general health and plans for cutting down with an alcohol worker or your GP.**

# What is a unit?

The strength and units within a drink can vary considerably. Here are some examples of drinks with approximate units.

## **Normal strength lager, beer, cider (3 to 4%)**

1 pint = 2 units

## **Premium strength lager, cider (5 to 6%)**

1 pint = 3 units

## **Super strength lager (8+%)**

1 pint = 4 units

## **White cider (7.5%)**

1 litre = 7.5 units

## **Wine (11 to 14%)**

125ml glass = 1.5 units.

175ml glass = 2 units.

Bottle = 8 to 10 units

## **Spirits (approx. 37.5%)**

Single measure = 1 unit.

350ml bottle = 13 units.

700ml bottle (or 70cl) = 26 units.

1,000ml bottle (or 1litre) = 37.5 units.

## **Alcopops**

1 bottle (330mls) = Typically 1.5 units.

# How to reduce your daily drinking safely

The rate you reduce your drinking is up to you, as you are in control.

It's important to try to strike a balance between not cutting down so quickly that you get severe withdrawal symptoms and not so slowly that you never actually stop!

Work out how many units you normally drink a day. This is your starting point.

From your starting point, a sensible approach is to try to reduce by two to five units per day.

# **Remember, you are drinking to control withdrawal symptoms, not to get intoxicated**

Do not assume you have to have a drink straight away after waking up. Try drinking nothing until you notice withdrawal symptoms.

Try to drink only when you start to feel yourself withdraw and then drink approximately two units at a time. Wait 20 to 30 minutes for the alcohol to take effect, and repeat this process each time you get withdrawal symptoms.

If you experience disturbed or disrupted sleep due to withdrawal symptoms, you could try a double dose before bed.

Remember, as you successfully reduce your daily alcohol intake, you should find your withdrawal symptoms become less severe.

Keep a daily record of what and when you drink and what withdrawal symptoms you get. This will help you keep track of your progress and give you a guide to how much you should reduce the next day .

If you are having withdrawal symptoms that are making you feel unwell, you may have cut down too quickly. If this is the case, you should discuss this with a health professional as soon as possible.

## **Look at your diet**

People who drink often suffer with health problems caused by poor diet. It may be necessary to take vitamin supplements, which you can get from your GP, along with a balanced diet.

## **How to maintain the changes you've made**

Concentrate on what you've gained (better health, more money etc), rather than on what you've given up. Also, congratulate yourself when you're doing well, as cutting down requires will power and self control.

Avoid high risk situations where drinking will be a temptation. You could also consider other interests, like the cinema, exercise etc.

Some people need support around their drinking. If you feel you need this please use the contact details mentioned on page 7.

You can also talk to your GP.
